

Shotgun shells are wonderful. They can be used in almost any situation where pain or amputation of limbs is concerned (including your own if you are not EXTREMELY careful. The best way to use shells, is the DoorBlam. The DoorBlam is a simple concoction of a shell taped to the back of a door with the ignition button facing away from the door (so it blows out against the door). Now position it somewhere where it will do the damage you want. i.e.- near the top for decapitation, middle for slow death, or low to make the victims kneecaps fly across the room. Now tape a thumbtack against a wall or something that that part of the door bumps up against. Tape it to the wall so that the point pokes through the tape, and position it so it will hit the ignite button upon impact... Its that simple. Instant pain!

Long Range Explosives

These are THE most difficult explosive I have ever tried to make (people I know have lost fingers and hands to this little fucker) IF you have a VVVVERY still hand, it might be accomplished. Ignite buttons usually take some force to make it blow, so CAREFULLY & LIGHTLY push a tack through tape and tape it to the back of the shell, with the tip of the tack LIGHTLY touching the button. Add more tape to the back to hold the pin in place. If you still have hands at this point, consider yourself lucky. Now you need to add a weight to the tack-end part to make sure it hits the ground first. Taping small rocks or making the shell by putting heavy loads towards the button helps. Placing a cracker (yes a cracker (Saltines, anyone ?)) between the tack-point and the button helps prevent detonation upon THROWING, which DOES happen. Now toss it up high and AWAY from you, and RUN LIKE SHIT does after you eat Mexican.

172.Electronic Accessories by Exodus

Some phreaks believe in the down-n-dirty customizing of equipment by crafting it themselves...not me! I believe that the other guy should build the stuff, and I'll steal it and use it later. This is a list of places where one can obtain the devices that would other wise have to be built by hand. But after all, a good phreak can take a pre-made item and adapt it to his needs.....

Radar Jammers:

The "Eclipse" \$199.00
