

Telenet-ID. Did you ever notice that you can type ID XXXX when being connected to Telenet? You are then asked for the password. If you have such a NUI (Network-User-ID) you can call nearly every host connected to any computer-network in the world. Here are some examples:

026245400090184 :Is a VAX in Germany (Username: DATEXP and leave mail for CHRIS)
0311050500061 :Is the Los Alamos Integrated computing network (One of the hosts connected to it is the DNA (Defense Nuclear Agency)!!!)
0530197000016 :Is a BBS in New Zealand
024050256 :Is the S-E-Bank in Stockholm, Sweden (Login as GAMES !!!)
02284681140541 :CERN in Geneva in Switzerland (one of the biggest nuclear research centers in the world) Login as GUEST
0234212301161 :A Videotex-standard system. Type OPTTEL to get in and use the ID 999_ with the password 9_
0242211000001 :University of Osb in Norway (Type LOGIN 17,17 to play the Multi-User-Dungeon !)
0425130000215 :Something like ITT Dialcom, but this one is in Israel ! ID HELP with password HELP works fine with security level 3
0310600584401 :Is the Washington Post News Service via Tymnet (Yes, Tymnet is connected to Telenet, too !) ID and Password is: PETER
You can read the news of the next day!

The prefixes are as follows:

02624 is Datex-P in Germany
02342 is PSS in England
03110 is Telenet in USA
03106 is Tymnet in USA
02405 is Telepak in Sweden
04251 is Isranet in Israel
02080 is Transpac in France
02284 is Telepac in Switzerland
02724 is Eirpac in Ireland
02704 is Luxpac in Luxembourg
05252 is Telepac in Singapore
04408 is Venus-P in Japan
...and so on...

Some of the countries have more than one packet-switching-network (USA has 11, Canada has 3, etc).

OK. That should be enough for the moment. As you see most of the passwords are very simple. This is because they must not have any fear of hackers. Only a few German hackers use these networks. Most of the computers are absolutely easy to hack !!! So, try to find out some Telenet-ID's and leave them here. If you need more numbers, leave e-mail. I'm calling from Germany via the German Datex-P network, which is similar to Telenet. We have a lot of those NUI's for the German network, but none for a special Tymnet-outdial-computer in USA, which connects me to any phone number.

Call 026245621040000 and type ID INF300 with password DATACOM to get more Informations on packet-switching-networks! The new password for the Washington Post is KING !!!!

154.Fucking with the Operator by The Jolly Roger

Ever get an operator who gave you a hard time, and you didn't know what to do? Well if the operator hears you use a little Bell jargon, she might wise up. Here is a little diagram (excuse the artwork) of the structure of operators

```
/-----\ /-----\ /-----\
!Operator!- > ! S.A. ! --->! BOS !
\-----/ \-----/ \-----/
!
!
V
/-----\
! Group Chief !
\-----/
```

Now most of the operators are not bugged, so they can curse at you, if they do ask INSTANTLY for the "S.A." or the Service Assistant. The operator does not report to her (95% of them are hers) but they will solve most of your problems. She MUST give you her name as she connects & all of these calls are bugged. If the SA gives you a rough time get her BOS (Business Office Supervisor) on the line. S/He will almost always back her girls up, but sometimes the SA will get tarred and feathered. The operator reports to the Group Chief, and S/He will solve 100% of your problems, but the chances of getting S/He on the line are nil.

If a lineman (the guy who works out on the poles) or an installation man gives you the works ask to speak to the Installation Foreman, that works wonders.
